

UTAH DIVISION OF OIL, GAS & MINING

MONTHLY OIL AND GAS PRODUCTION REPORT

All oil and gas well operators in Utah are required to submit monthly production reports to the Division of Oil, Gas and Mining. This publication is a summary of those reports.

■ **This report consists of four main sections:**

- Production by Well
- Production by County
- Production by Field
- Production by Operator

■ **Production by Well**

- All “active” wells are listed on the report. Active wells are defined as those in a producing, shut-in, or temporarily-abandoned status during the report month.
- All wells that have had any production during the current report year are listed on the report, even if they are no longer in an active status. This includes wells that have produced but now are plugged or have been converted to non-producing well types during the year. These wells will drop from the report beginning with the first report of the next calendar year. At that time, the cumulative production from these wells is then added to a line of the report entitled, “Wells Plugged and Abandoned or Converted to Non-productive Well Types During Previous Calendar Years,” near the bottom of this section of the report.
- Some of the active wells listed in the report may have produced in the past from additional zones that are no longer active. These zones are listed separately and are labeled “Abandoned Zone.”

■ **Production by County**

- All counties are listed, whether they have production or not.

■ **Production by Field**

- All oil and gas fields with “active” wells (as defined above) are listed on the report.
- All oil and gas fields that have any cumulative production are listed on the report, even if they no longer have any active wells.

■ **Production by Operator**

- All oil and gas operators with “active” wells (as defined above) are listed on the report.
- All oil and gas operators that have any cumulative production are listed on the report, even if they no longer have any active wells.
- **WARNING:** The cumulative production volumes shown for each operator may not be 100% accurate. The division’s pre-1984 well production data is not associated with any operator information in our electronic data files. The cumulative production for each well from this time period has therefore been added to the well’s first known operator in our database. In addition, some pre-1984 cumulative volumes were obtained from sources other than actual production reports on record with the division. The accuracy of those volumes is unknown.

- Substantial effort is made to create an accurate report, however errors may occasionally occur. Discovery of any discrepancies may be reported to the division by calling (801) 538-5331 or (801) 538-5275.
